

CIP 3.0

# CI PROTOCOL OVERVIEW

CIP Protocol is a novel protocol and financial asset, which rewards users with sustainable fixed compound interest as residual return on their use of the system. The protocol is decentralized so it cannot be governed by any centralized authority and its integrity can only be manipulated using a Proof-of-Work consensus system.

To make life easier as a Crypto Investor, we're introducing the CIP Protocol. ASAR rewards holders of \$CIP with stable returns on all Auto-Staked \$CIP. Join the revolution in staking protocols and secure your financial future.

ASAR gives the CIP token automatic staking and compounding features including BUSD Reflection, and the highest Fixed APY in the market at 2,222,222%

Invest your cryptocurrencies in innovative projects with our smart contract protocol. CI Protocol lets you earn higher rates and build a diversified portfolio, all for a fraction of the cost. No more risk or scams, just quality investments and investments that last.

1

### **AUTO STAKING**

As the easiest auto-staking in Defi, CI Protocol is a blockchain-based Autostaking protocol, so the CIP token never leaves your wallet. All you need to do is buy, hold and automatically receive rewards is just to stake it!

2

### **BUSD DIVIDEND**

10% of all trading fees are stored in the CIP Dividend Fund, which helps to achieve a variety of outcomes, including the most profitable, stable and long-term sustainability. This stored dividend is claimable by the CIP holders every 30 minutes.

3

### **AUTO BURN**

The CI Protocol is a new blockchain platform for the common good, with one of its most exciting features being an automatic token burn system. The Fire pit will only remove 1% of tokens from circulation, and can be monitored by the public in real time!

4

### **TREASURY**

1% of the trade tax is reserved for the CIP treasury which will be used for marketing & development purposes and also help us sustainably grow the community.

5

### **ANTI DUMP**

There is a special feature in CIP which prevents its high APY to prevent a dump in price. It will rebase its price to 1 BUSD every 24 hours if the price falls below it.

A cluster of red 3D cubes of various sizes arranged in a stepped, geometric pattern on the right side of the page.

**6**

## **NFT REWARDS**

This feature is exclusively for our presale investors. Every contributor who contributes 1 BNB or more will receive limited NFTs depending on the multiple of BNB invested. 2% of the trade tax will go towards NFT rewards

## AUTO-STAKING PROTOCOL AND AUTO-REFLECTION

The ASAR Auto-Staking Protocol and Auto-Reflection feature is a simple yet cutting-edge function called Buy-Hold-Earn, that provides the ultimate ease of use for \$CIP holders.

### BUY-HOLD-EARN

- ★ By simply buying and holding a \$CIP token in your wallet, you earn rebase rewards as interest payments directly into your wallet. Your tokens will increase every 1 minute.
- ★ Get your BUSD after just 30 mins.

Using a Positive Rebase formula, CIP makes it possible for token distribution to be paid directly proportional to the epoch rebase rewards, worth 0.001904% every 1 minute epoch period of the total amount of \$CIP tokens held in your wallet.

The rebase rewards are distributed on each EPOCH (1 minute rebase period) to all \$CIP holders.

## AUTO BURN

1% of all \$CIP traded are burnt in the dead address. The more that is traded, the more get put into the dead address causing it to grow in size, larger and larger through self-fulfilling Auto-Compounding, reducing the circulating supply and keeping the CI protocol stable.

The other benefit to an everlasting burn of circulating supply is that due to the deflationary nature of it, equates to a higher value of each \$CIP token, therefore increasing the individual value.

## BUSD DIVIDEND

The Dividend serves as a BUSD Reflection to achieve the most profitable, stable and long-term sustainability of the CI Protocol by maintaining a consistent 10% dividend to all \$CIP token holders.

# TREASURY

The treasury functions as additional financial support for the \$CIP. This additional support can become important in the event of an extreme price drop of the \$CIP token or unforeseen black-swan event. It helps to establish a floor value for the \$CIP token.

The treasury may also be used to fund new Compound Interest Protocol products, services, and projects that will expand and provide more value to the CIP community as well as providing funding for marketing.

# APY

APY stands for Annual Percentage Yield. This measures the real rate of return on the amount of your principal tokens by taking into account the effect of compounding interest. In the case of CI Protocol, your \$CIP tokens represent your principal, and the compound interest is added periodically on every Rebase event.

Your new principal amount is your then-current \$CIP token amount, plus the new rebase token amount. This total amount is what gets calculated for your next rebase rewards.

One interesting fact about APY is that your balance will grow not linearly but exponentially over time! Assuming a daily compound interest of 2.780%, if you start with a balance of 1 \$CIP on day 1, after a year, your balance will grow to about 22,222 \$CIP. That is the power of compound interest!

## COMPOUND INTEREST CYCLE

In order to maintain sustainability and future growth, we have introduced a Compound Interest Cycle component which will award \$CIP token holders with continued compound interest in perpetuity.

Each Interest Cycle is 1 minutes in length and is referred to as an EPOCH.

There are 1440 epochs in 1 day.

## ANTI DUMP

This feature will apply a negative rebase once every 24 hours whenever the price falls below 1 BUSD. This will help to prevent dumps and stabilize the price & supply in the long run, which will occur from massive inflation of the high APY.

This allows CIP to keep the high APY of 2,222,222% running in perpetuity without worrying about the dump of CIP price due to inflation.

## NFT REWARDS

2% of the trade tax will be distributed to our NFT holders weekly which will be independent of APY and BUSD distribution.

The NFTs will be limited and minted after the presale ends and distributed to the contributors depending on the contributions i.e., for every 1 BNB contributed by the contributor they will receive 1 NFT and each NFT will receive 1 part of the tax to be distributed each week.

# COMPETITIVE ADVANTAGES

## VISION & GOAL

- Smart Contract - Test-net
- Audit of contract
- PR Marketing
- YouTube Marketing Campaign
- Achieve 50K holders by Q2 2022
- Deployment Phase - dApp V2 Dashboard

- Deployment Phase - Smart Contract Deployment - Mainnet
- Presale on PinkSale
- Bounty Campaign
- DappRadar Listing
- Achieve 100K holders by Q3 2022
- On-Ramp Integration

- Build Phase - dApp V1 Dashboard
- PinkLock Liquidity Locked 10 years
- Twitter Marketing Campaign
- Airdrop Campaign
- Build Phase - dApp V2 Dashboard
- Cross-Chain Integration
